# Protein Synthesis Worksheet

1. In DNA, adenine binds with _____ and guanine binds with _____.

2. In RNA, adenine binds with _____ and guanine binds with _____.

3. Transcription takes place in the _____; translation takes place in the _____.

4. The building blocks of nucleic acids are _____.

5. When the DNA "cookbook" unzips, a complete protein "recipe" called a _____ is exposed.

6. At that time, a complementary copy of that "recipe" is made. Scientifically stated, _____-RNA is formed from RNA _____, in a process called _____.

7. When this "string" of RNA leaves the nucleus through a nuclear pore, it goes into the cytoplasm and binds to another player, ____-RNA (the"site of protein synthesis").

8. The ___-RNA "recipe" is "read" and a protein is assembled in a process called _____.

9. The building blocks of proteins are _____, so another form of RNA is necessary to deliver those building blocks to the site of protein synthesis. This is _____RNA.

10. The 3 nitrogen bases of DNA are called _____; the 3 nitrogen bases of _____are called anticodons; the 3 nitrogen bases of _____are called codons.

11. All of the above steps take place during what PHASE of the cell cycle? _____

12. Know these steps in order, and be sure to learn the associated vocabulary.

13. Chromatin is _____.

14. A chromosome is _____.

15. A gene is _____.

16. The genome is _____.

17. Using the **tRNA** Dictionary below, do transcription and translation to build the protein sentence on the next page.
